USG LEVELROCK® BRAND
SAM-N75™
SOUND ATTENUATION MAT

Premium sound mat product for improved STC and IIC values
• STC and IIC values help meet or exceed code requirements per Section 1207 of the International Building Code
• Tested for system durability per ASTM C627
• Installed by USG Levelrock authorized applicators

USG Levelrock® Brand SAM-N75™ Sound Attenuation Mat provides an economical method of improving the STC and IIC ratings of wood frame buildings. With a thickness of 3/4 in. (19 mm), this sound mat is ideal for rehab work involving loft-type units where there is no ceiling. These types of installations depend almost exclusively on the performance of the sound mat to attenuate impact noise. USG Levelrock SAM-N75 Sound Attenuation Mat requires a minimum topping of 1-½ in. (38 mm) of USG Levelrock® engineered cementitious underlayment.

1. Do not use in exterior applications.
2. Do not use as a wear surface.
3. Do not use mechanical fasteners to install the sound attenuation mat as mechanical fasteners conduct impact sound, compromising acoustical isolation.
4. Do not install where continuous exposure to moisture is a possibility.
5. Structure shall be designed so that deflection does not exceed L/240 from combined dead and live loads and L/360 from live loads. Certain floor coverings such as marble, limestone, travertine and wood may have more restrictive deflection limits. Consult the appropriate floor-covering manufacturer.
6. For wood subfloors, do not install on plywood/OSB subfloors lacking tongue and groove edges without back-blocking.

USG Levelrock SAM-N75 Sound Attenuation Mat can be used over a variety of subfloors including plywood, OSB, pre-cast concrete, concrete and corrugated steel deck. For plywood or OSB subfloors, the edges must be tongue and groove or the use of back-blocking is required. The subfloor must be clean and free of construction debris and dirt. The building temperature should be maintained at a 50 °F (10 °C) minimum.

USG Levelrock SAM-N75 Sound Attenuation Mat should be primed with USG Levelrock® Wood Primer prior to the installation of the underlayment.

USG Levelrock® Perimeter Isolation Strip must be installed between the sound attenuation mat and walls or floor protrusions. The perimeter isolation strip must be installed so that there is no leakage of USG Levelrock engineered cementitious underlayment as any breach will compromise the sound system performance. Follow the detailed drawings in Assemblies (pg. 2) for specific instructions for USG Levelrock SAM-N75 Sound Attenuation Mat. For further perimeter isolation strip instructions, see USG Levelrock® Brand Perimeter Isolation Strips Submittal (IG1874) at usgperformanceflooring.com.

Protect USG Levelrock underlayment floors poured over sound attenuation mat from heavy trade traffic loads (i.e. loaded drywall carts, heavy tool cabinets, etc.) with plywood.

For further details on installation requirements, specifications and the most up-to-date product information, please see usgperformanceflooring.com.
Because loft assemblies vary greatly from job to job, field testing NNIC and NISR tests should be conducted by a licensed acoustician according to ASTM E336 (for NNIC) and ASTM E1007 (for NISR).
An extended warranty may apply when using USG Levelrock SAM-N75 Sound Attenuation Mat in a system application. Please contact USG for further details.

**SAFETY FIRST!**
Follow good safety/industrial hygiene practices during installation. Wear appropriate personal protective equipment. Read applicable SDSs and literature before specification and installation.
