USG INDUSTRIAL GROUND GYPSUM

Un-muddy the waters. USG Industrial Ground Gypsum is an inexpensive, mineral-based solution for clearing turbidity in ponds and lakes.

THE GYPSUM SOLUTION

Turbidity (a muddy or cloudy appearance) in ponds and lakes may occur from heavy rainfall, soil erosion or fish feeding activities, or from man-made sources such as construction and landscaping. Although turbidity may clear naturally within a few days, the water may remain turbid when particles remain suspended in a colloidal solution.

To clear the waters, USG Industrial Ground Gypsum acts as a flocculant to gather together negatively charged particles until they have gained enough mass to settle out. Flocculation of ponds and lakes help keep silty/muddy waters from reaching waterways and watersheds. USG Industrial Ground Gypsum is:

- Ideal for sand and gravel quarries, retention/detention ponds, golf course ponds and catfish farms
- A mineral product, mined from gypsum quarries
- Safe for aquatic life
- Easy to use – dispense with a quarry mixing tank, HydroSeeder, catfish thrower or empty behind boat trolling motor

Clear results. USG Industrial Ground Gypsum.
