Re: Storage and Shelf Life Recommendations

To Whom it May Concern:

U.S. Gypsum Company manufactures the following products at its Southard, Oklahoma plant:

Terra Alba, Food & Pharmaceutical Grade (Dihydrate calcium sulfate)

SNOW WHITE® Filler, Food & Pharmaceutical Grade (anhydrous calcium sulfate)

Food Grade Hydrous calcium sulfate

USG recommends that these products are best when stored at temperatures below 110 F. protected from moisture or excessive humidity and processed within one year of the date of manufacture. After this period of time, agglomerates may form which would affect the free flowing nature of the product. At recommended storage conditions, the one year recommendation merely relates to processing. These products do not change chemically over time and still meet all Food Chemicals Codex and National Formulary specifications beyond one year.

Sincerely,

UNITED STATES GYPSUM COMPANY
