

HRC > 50%

USG = HRC

***With today's emphasis on the design of sustainable spaces, recycled content has become a major consideration during specification.***

*Which is why USG Ceilings offers hundreds of products that meet or surpass the definition of high-recycled content by containing more than 50 percent recycled content.*

*Choosing HRC products, combined with sustainable design, gives you the ability to create structures that require fewer natural resources throughout their useful lives to remain comfortable, productive and efficient. In addition, specifying HRC ceiling products can help you achieve LEED MR credits.*

*The broad range of standard acoustical ceiling panels, suspension systems and specialty panels offered by USG gives you plenty of options to find an HRC ceiling solution that meets your project and design criteria without compromising on performance.*

*To learn more about how USG ceilings and suspension systems can contribute to sustainable spaces, visit the USG free online design tool, USG Design Studio®, for access to LEED and other sustainability resources at [usgdesignstudio.com](http://usgdesignstudio.com) and [sustainableceilings.com](http://sustainableceilings.com).*
