Re Testing

Thank you for allowing Polyguard Products Inc to test our materials on you Securrock Mat Sheathing. Polyguard Products materials are compatible with Securock.

In our test results you will see Polyguard 400 Flashing used as test material, Polyguard Alumflash uses the same formulation of compound as the 400 and would produce the same results. Test results attached.

Please let me know if you need any additional support.

Please contact me if you need further assistance.
