

Project Profile

CGC Ceiling System Provides Sports Complex With a Modern Look and Feel

Project Name:
Sixteen Mile Sports Complex
Application/Building Type:
Commercial
Location:
Oakville, Ontario
Architect:
PBK Architects
Contractor:
EllisDon and Marin
Contracting
Featured Products:
CGC Curvatura™ 3-
Dimensional Ceiling System

“We proposed several Curvatura layouts until we arrived at an elegant Swoosh like curve to fit within the bulkheads, covering electrical and mechanical components at various elevations. Even with direct sunlight, the Curvatura ceiling finish looks uniform and compliments the overall space well.”

*- Faris Alnakkar,
CGC Design Eng.*

During the construction of the Sixteen Mile Sports Complex in 2010, EllisDon and Marin Contracting were faced with the challenge of providing an interior ceiling that was accessible, yet still provided a high-end finish that was consistent with the design of this modern facility.

After working closely with CGC Inc. and our local technical staff in Oakville Ontario, the decision was made to install CGC Curvatura™ 3-Dimensional Ceiling System.

The system allowed Ellis Don and Marin Contracting to create a dramatic 3-dimensional curved ceiling that spans over five hundred feet.

The system consisted of the Curvatura Elite suspension components, perforated aluminum infill panels, and acoustical backer to achieve the desired acoustical performance. Other products on this project included Donn® ceiling suspension grid and Olympia Micro™ ClimaPlus™ ceiling panels.
