CGC SHEETROCK® BRAND
MOLD TOUGH® PANELS
FIRECODE® X

15.9 mm (5/8 in.) Type X panels with moisture and mould resistance for wall and ceiling applications

- Feature a noncombustible, moisture-resistant gypsum core encased in moisture- and mould-resistant, 100% recycled green face and brown back papers
- Comply with ASTM C1396, *Standard Specification for Gypsum Board*, for 15.9 mm (5/8 in.) Type X, water-resistant gypsum wallboard and exterior gypsum soffit board
- Underwriters Laboratories Inc. (cUL) Classification as to fire resistance, surface-burning characteristics and noncombustibility
- Achieved GREENGUARD Gold Certification and qualifies as a low VOC emitting material (meets CA 01350)

CGC Sheetrock® Brand Mold Tough® Panels Firecode® X (UL Type SCX) are 15.9 mm (5/8 in.) Type X panels that feature a noncombustible, moisture-resistant gypsum core that is encased in moisture- and mould-resistant, 100% recycled green face and brown back papers. When tested in accordance with ASTM D3273, *Standard Test Method for Resistance to Growth of Mold on the Surface of Interior Coatings in an Environmental Chamber*, the panels meet or exceed ASTM C1396 specifications. The face paper is folded around the long edges to reinforce and protect the core, and the ends are cut square and even. The long edges of the panels are taped, allowing joints to be reinforced and concealed with CGC Sheetrock® or Synko® Brand joint treatment systems. The panels are cUL Classified for fire resistance and can be used in any UL Design in which Type SCX panels are listed. On the face along the long edge of each panel, the UL Type Designation is printed for easy identification by building inspectors.

- Commercial or residential applications where 15.9 mm (5/8 in.) Type X panels with moisture and mould resistance are required
- New or repair and remodel construction
- Load-bearing and nonload-bearing wood- or steel-framed fire-rated walls and ceilings
- Interior tile substrate in dry locations or areas with limited water exposure. Qualifies as a water-resistant backing board for ceramic tile in residential tub and shower enclosures as permitted in the National Building Code of Canada (9.29.10.4)
- Protected exterior soffit and ceiling applications

**LIMITATIONS**

1. Avoid exposure to sustained temperatures exceeding 52°C (125°F).
2. Avoid exposure to excessive, repetitive or continuous moisture before, during and after installation. Eliminate sources of moisture immediately.
3. Must be stored off the ground and under cover in accordance with Gypsum Association's GA-801, *Handling and Storage of Gypsum Panel Products*.
4. For protected exterior ceiling and soffit applications, the panels must be protected from direct exposure to weather. Refer to the CGC Gypsum Construction Handbook for installation recommendations.
5. Not recommended for exterior soffits and ceilings which project upwards and away from the building proper.
6. Not suitable for use as a substrate for tile in wet areas such as tubs and showers, gang showers and other areas subject to direct water exposure. Not to be installed in areas exposed to continuous high humidity such as indoor pools or spaces subject to open or standing water.
7. Use as a tile substrate is limited to tile installed according to the most current TTMAC, TCNA and ANSI specifications. Consult with adhesive and tile manufacturers for recommendations for maximum size and weight parameters for use with gypsum board.
8. If panels are to be tiled, they should not be installed over a vapour barrier.
For maximum framing spacing in non-fire-resistance-rated applications of gypsum panel products, refer to Gypsum Association’s GA-216, Specifications for the Application and Finishing of Gypsum Panel Products or ASTM C840, Standard Specification for Application and Finishing of Gypsum Board. For fire-resistance-rated applications, refer to the published UL Design or GA File Number.

**Note:**
1. On ceilings to receive water-based texture material, 15.9 mm (5/8 in.) gypsum board shall be applied either parallel to framing spaced at 406 mm (16 in.) OC or perpendicular to framing spaced maximum 610 mm (24 in.) OC. See Appendix A.3 of Gypsum Association’s GA-216, Specifications for the Application and Finishing of Gypsum Panel Products for more information.

For high-quality finishing results, CGC recommends CGC Sheetrock® or Synko® Brand interior finishing products.

Painting products and systems should be used that comply with recommendations and requirements in Appendices of ASTM C840. For priming and decorating with paint, texture or wall covering, follow manufacturer’s directions for materials used. Gypsum Association’s GA-214, Recommended Levels of Finish for Gypsum Board, Glass Mat and Fiber-Reinforced Gypsum Panels should be referred to in order to determine the level of finishing needed to ensure a surface properly prepared to accept the final decoration.

All surfaces, including applied joint compound, must be thoroughly dry, dust-free and not glossy. Prime with CGC Sheetrock® Brand First Coat™ Primer. Synko® Brand Pre-Coat™ Drywall Surface Equalizer or with an undiluted, interior latex flat paint with high-solids content. Allow to dry before decorating.

To improve fastener concealment where gypsum panel walls and ceilings will be subjected to critical artificial or natural side lighting, or will be decorated with a gloss paint (eggshell, semigloss or gloss), the gypsum panel should be skim coated with joint compound. This equalizes suction and texture differences between the drywall face paper and the finished joint compound before painting. When a Level 5 finish is required, use CGC Sheetrock® Brand Tuff-Hide™ Primer-Surfac. See CGC Sheetrock® Brand Tuff-Hide™ Primer-Surfac. Submittal Sheet (JC0156) for limitations and application instructions.

For more information, refer to CGC literature, *Finishing & Decorating Gypsum Panels White Paper (J2010)*.
Per ASTM C473, Test Methods for Physical Testing of Gypsum Panel Products, the average water absorption for CGC Sheetrock® Brand Mold Tough® Panels Firecode® X is not greater than 5% by weight after two-hour immersion.

In independent lab tests conducted per ASTM D3273 at the time of manufacture, the panels meet or exceed ASTM C1396 specifications. This ASTM lab test may not accurately represent the mould performance of building materials in actual use. Given unsuitable project conditions during storage, installation or after completion, any building material can be overwhelmed by mould. To manage the growth of mould, the best and most cost-effective strategy is to protect building products from water exposure during storage and installation and after completion of the building. This can be accomplished by using good design and construction practices.
