

compasso™ Elite

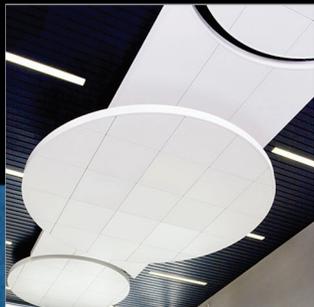

AN ENDURING DESIGN IS NOT ENOUGH. IT MUST BE BUILT TO LAST.

As an architect, you want your vision to be realized today and to last forever. With this in mind, USG is proud to introduce extruded aluminum Compasso Elite, the latest addition to the expanding Compasso portfolio of ceiling trim systems.

Compasso Elite features superior hardware that assures successful, blemish-free installation so you can create crisp, clean island ceilings or fascias that define spaces and provide lasting beauty.

The choice is yours: the roll-formed technology of Compasso Standard and C² that you know, as well as the new Compasso Elite and redesigned Compasso Slim from the extruded aluminum technology. All afford the benefits of acoustical suspension systems compared to drywall soffits—sound control, accessibility and the use of lay-in fixtures.
