

A CEILING THAT CAN IMPROVE YOUR BOTTOM LINE.

As a contractor,

getting the job done right is good, but getting it done under budget and without callbacks is better—especially where free-form island ceilings are concerned. With this in mind, USG is proud to introduce Compasso Elite, the latest addition to the expanding Compasso portfolio of ceiling trim systems.

Extruded aluminum Compasso Elite features proprietary splice plates and attachment clips that make installation simpler and faster, with no special tools required. This results in time and cost savings, not to mention fewer callbacks.

The choice is yours: the roll-formed technology of Compasso Standard and C² that you know, as well as the new Compasso Elite and redesigned Compasso Slim from the extruded aluminum technology. All afford the benefits of acoustical suspension systems compared to drywall soffits—sound control, accessibility and the use of lay-in fixtures.
