ACHIEVE A DESIGNER LOOK FOR A LONG-LASTING SHOWER.

Few would argue the stopping power of a beautifully tiled shower. But a true craftsman knows that real beauty goes well beyond carefully laid tiles and into the system itself. Choose the USG Durock™ Brand Shower System. This fully bonded waterproofing system is designed to control moisture independently of the tile covering while creating a solid base for a long-lasting shower.

THE KEY TO A SUCCESSFUL SHOWER IS WATERPROOFING

The most critical step in the installation of a successful shower is waterproofing of the materials beneath the surface. Traditional construction materials such as plywood and oriented strand board (OSB) must be protected from moisture at all times. Even shower components such as grout, mortar and code-approved water-resistant backerboards are not waterproof on their own. In fact, most shower failures occur due to lack of or improper waterproofing of the floor/wall enclosure.

With the USG Durock™ Brand Shower System, you get high performance components designed to work in harmony to stop moisture in its tracks.

CONFIDENCE BENEATH THE SURFACE

While the most common shower installations consist of a traditional mortar bed, they can be problematic. With this method the shower pan liner is loose-laid over a sloped mortar bed and a second layer of mortar is placed on top. However, care must be taken to ensure that the weep holes in the drain body are kept open to allow any water that has penetrated the tile and grout to escape. If not properly constructed, the mortar bed that is sandwiched between the shower pan liner and the tile covering will collect moisture and remain saturated for the life of the installation, creating the perfect conditions for mold and bacteria growth. With the USG Durock™ Brand Shower System, you get a simple waterproofing system that’s guaranteed to work, every time.

ONE TRUE SYSTEM TO ELIMINATE LEAKS AND POTENTIAL FOR MOLD

The USG Durock™ Brand Shower System offers many benefits that traditional mortar beds do not:

• Waterproof membrane that’s installed on top of a mortar bed or foam tray, as opposed to beneath.

• All shower components and floor/wall transitions are bonded together to create a waterproof enclosure, instead of being loose-laid, caulked, nailed or folded in place.

• Ten-year warranty ensures complete confidence in the system.

• Suitable for continuous-use steam showers.

With the USG Durock™ Brand Shower System, you get a superior shower from a name you trust. For more information, visit durockshowersystem.com
KEY PRODUCTS

The USG Durock™ Brand Shower System includes:

- Pre-sloped Tray—standard & custom sizes
- Waterproofing Membrane & Band
- Shower Tray Disk
- Drain Kit & Grate Kit Assembly
- Inside & Outside Corners
- Pipe Seal & Mixing Valve Seal
- Sealant
- Curbs, Benches, Niches
- Designer & Pro Series Grates

A variety of backerboard options can be used:

- USG Durock™ Brand UltraLight Foam Tile Backerboard
- USG Durock™ Brand Cement Board
- USG Fiberock® Brand Tile Backerboard/Underlayment
- USG Durock™ Brand Glass-Mat Tile Backerboard

Additional membrane options include:

- USG Durock™ Brand Waterproofing Membrane & Band
- USG Durock™ Brand Tile Membrane

LARGE FORMAT TILES CAN BE USED

EASY BARRIER-FREE CONSTRUCTION

FULLY CUSTOMIZABLE SHOWER TRAYS

ADDITIONAL OPTIONS INCLUDE BENCHES, NICHES AND DESIGNER GRATES
