The USG Ensemble® Acoustical Drywall Ceiling is a new solution for interior ceilings that combines the seamless look of drywall with the acoustical properties of tile-and-grid systems. Breakthrough innovations across core USG product technologies come together in one ceiling system to maximize NRC, CAC and LR performance. The bright white finish and monolithic appearance eliminate distracting gridlines. Specify the USG Ensemble® Acoustical Drywall Ceiling—you no longer need to compromise aesthetics for acoustical performance in the spaces you create.

OVERVIEW

Although aesthetically appealing, hard finishes—such as glass, concrete, stone, wood and drywall—reflect sound and make spaces noisy and difficult to hear in. Until now, the cost-effective solution for sound control has been a traditional acoustical ceiling tile-and-grid system. The USG Ensemble® Acoustical Drywall Ceiling is an innovative solution that integrates technologies from our ceiling tile, wallboard and finishing systems. It installs similarly to traditional drywall, and can be incorporated into spaces where acoustical ceilings and wallboard ceilings would normally be used. It can be intermixed with acoustical ceilings in locations where plenum access is needed, and all typical drywall trims and fixtures are compatible with the system.
BALANCED ACOUSTICS

Sound is created in the form of pressure traveling in waves through any medium, most commonly air. Noise is excessive or unwanted sound. Hard surfaces like stone, glass and wood may be aesthetically pleasing, but can make for noisy spaces because they reflect sound. Too much noise makes it hard to work, hard to learn and hard to relax.

<table>
<thead>
<tr>
<th>Noise Reduction Coefficient (NRC)</th>
<th>Ceiling Attenuation Class (CAC)</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>NRC:</strong> A measure of sound absorption.</td>
<td><strong>CAC:</strong> Applies to the sound attenuation of acoustical ceilings with a shared plenum above horizontally adjacent spaces.</td>
</tr>
</tbody>
</table>

Noise Reduction Coefficient can be thought of as the rate at which sound dissipates within a space, and is measured in reverberation over time. The higher the NRC value, the shorter the reverberation time. An NRC of 0 indicates perfect reflection; an NRC of 1 indicates perfect absorption. Effective sound absorbers are generally porous, pliable, soft or viscous materials that can rapidly dissipate sound waves. Building materials like acoustical ceiling tiles and fiberglass insulation are effective sound absorbers.

Ceiling Attenuation Class measures how well a ceiling blocks sound transmission. Specifically, Ceiling Attenuation Class is a measure of reduction in sound transmission via plenum path above two adjacent rooms. It is a two-pass test, as sound must travel through one ceiling, into the plenum space, and back down through the ceiling into the adjacent room. The performance is expressed in decibel reduction between the two rooms.

A general rule of thumb is that NRC and CAC performance are inversely proportional. The key for balanced acoustics is to develop ceiling systems that perform well in both categories. High-performance ceiling systems with balanced acoustics achieve an NRC of 0.70, and a CAC of 30 or greater, and provide good sound control for many applications.
HOW THE SYSTEM WORKS

The USG Ensemble™ Spray-Applied Finish has been engineered to allow sound to pass through while at the same time providing a visual that is similar to painted gypsum board. Sound passes through the finish and into the perforations of the USG Sheetrock® Brand Ensemble® Four-Sided Taper™ Panels. From there most of the sound pressure is absorbed by the Ensemble® back scrim and the USG Ensemble® High-NRC Backer Panels. A portion of the sound is trapped in the plenum space where it dissipates, resulting in NRC of 0.80.

The USG Ensemble™ Spray-Applied Finish is engineered to be acoustically permeable. Sound passes through the finish and perforations, where it dissipates into the acoustical backer and plenum.

Note: Care should be taken to maximize the open area of the perforated panels. Excessive joint compound coverage can reduce the acoustical performance of the product. Small spaces (such as conference rooms) with frequent gypsum panel penetrations (e.g. closely spaced light fixtures in a narrow rip of panel) may not be an appropriate application to achieve the published system acoustical performance. Consult your USG architectural representative for details.

</tr>
</tbody>
</table>

All trims, transitions and accessories designed for use with standard 5/8”-thick gypsum panels can be used with the USG Ensemble® Acoustical Drywall Ceiling. Plastic (PVC and vinyl), metal (steel and aluminum) and paper-faced tape-on beads and trims can be specified. The USG Ensemble™ Spray-Applied Finish bonds well with these types of trims. The finish also bonds well with primed surfaces, but all non-white trims, transitions, or accessories must be primed white with a high solids primer prior to spray application.

REFLECTED CEILING PLAN

A = DGLW26 main tee
B = cross tee
C = 12-gauge hanger wire
D = USG Sheetrock® Brand Ensemble® Four-Sided Taper™ Panels
E = joints
F = USG Ensemble® High-NRC Backer Panels
G = USG Ensemble™ Spray-Applied Finish
DESIGN CONSIDERATIONS

The USG Ensemble® Acoustical Drywall Ceiling is ideal for simple, flat, sloped, or curved ceilings without excessive penetrations or recessed light fixtures. This is so the perforated acoustical field area is maximized and joint finishing and accessories are minimized. Ceilings with multiple terminations, penetrations and flush-mounted fixtures all must be finished with joint compound, which reduces the perforated acoustical area and the sound performance.

Understanding the type of lighting source and illumination direction is crucial when selecting ceiling systems. Light sources that illuminate at oblique angles can magnify imperfections across any surface. This is especially true for ceilings because they are often adjacent to windows, where natural light enters the space obliquely in the morning and evening. Light that shines perpendicular (either up or down) is more forgiving and can be beneficial in a ceilings application. Indirect lighting that shines on the ceiling and reflects off at multiple angles minimizes surface imperfections and can create a warm glow within the space. USG Ensemble® Acoustical Drywall Ceiling is well-suited for applications with direct and indirect lighting.

The USG Ensemble® Acoustical Drywall Ceiling offers excellent acoustical performance when high NRC/CAC is needed to meet the project requirements. However, NRC system performance can be affected by the plenum space. The industry standard sound performance test, ASTM C423, is conducted with a 16" plenum depth. When framing Ensemble with USG Drywall Suspension System components, ASTM C423 “E-400” mounting test results should be used. When installing Ensemble with Z-furring or alternate framing for Direct Mount installations: ASTM C423, “A-mount” test data should be used.

Frequently the acoustical performance of ceiling systems tested per ASTM C423 are negatively affected by a shallow plenum. USG Ensemble® performs excellent in both scenarios. When either framed with a drywall suspension system with a deep plenum or direct attached to a solid substrate, Ensemble achieves a 0.80 NRC with 1" backer panels.

The USG Ensemble® Acoustical Drywall Ceiling provides the best NRC performance when used in applications with a ducted plenum space above.

USG Ensemble® ceiling installed on suspended drywall T-Bar System

* Data for Suspended System only

**USG Ensemble® Acoustical Drywall Ceiling - Suspended System**

USG Sheetrock® Brand Ensemble® Four-Sided Taper™ Panels panels back loaded with 1” USG Ensemble® High-NRC Backer Panels on USG Drywall Suspension System.

**USG Ensemble® Acoustical Drywall Ceiling - Direct Mount System**

USG Sheetrock® Brand Ensemble® Four-Sided Taper™ panels back loaded with 1” USG Ensemble® High-NRC Backer Panels and attached with Z-Furring on to wood floor joists.

USG Sheetrock® Brand Ensemble® Four-Sided Taper™ panels back loaded with 1” USG Ensemble® High-NRC Backer Panels and attached with Z-Furring on to open-web wood floor truss.
The USG Ensemble® Acoustical Drywall Ceiling has the appearance of drywall yet performs like an acoustical ceiling. Installation is very much like a lay-in acoustical tile-and-grid system. Then the highly engineered USG Sheetrock® Brand Ensemble® Four-Sided Taper™ Panels are screw-attached to the bottom of the suspended USG Drywall T-Bar System framing members. Joints are finished like drywall. Then acoustically transparent finish coatings are applied to the surface as the final decoration.
Floating clouds or peninsula ceilings can be created with the USG Ensemble® Acoustical Drywall Ceiling. Specify USG Compässo™ Elite Trim for Drywall (straight and radiused available) to have a finished edge. The factory-painted trim can be left unfinished, but it is more desirable to spray-coat with the USG Ensemble™ Spray-Applied Finish.

Hanger wires must be placed on framing members within 12” of the floating perimeter. For more information see detail #19.
The suspended USG Drywall T-Bar Grid System (used to install the USG Ensemble® Ceiling), is fully compatible with USG Donn® Brand DX*/DXL™, Centricitee™ DXT™, Identitee® DXI™, Fineline® DXF™, and other USG acoustical tile and suspension systems. This makes it easy to transition between flat USG Ensemble® ceilings and acoustical ceilings or drywall ceilings. When transitioning to flat drywall ceiling areas or bulkheads and soffits, finishing with the USG Ensemble™ Spray-Applied Finish creates a seamless and consistent aesthetic. Standard gypsum panels (non-acoustical) can be coated with the USG Ensemble™ Spray-Applied Finish (for an aesthetic match). Standard gypsum panels require priming with a high-solids primer before application of the USG Ensemble™ Spray-Applied Finish.
The USG Drywall T-bar System, used to frame the suspended USG Ensemble® ceiling, easily accommodates conventional or recessed light fixtures, linear light fixtures, access doors or HVAC ceiling diffusers. USG Ensemble™ Spray-Applied Finish can be used to coat most primed or painted metal access doors for an improved aesthetic that matches the ceiling.

“Virtually Invisible” style access panels work great for drywall and Ensemble® as they blend in with the ceiling. For areas needing a little more frequent access, key-access doors or concealed access doors (frame, latch and hinge) are a good fit. For very frequently accessed panels, do not coat with Ensemble™ Spray-Applied Finish.
Control joints are used to control stress caused by expansion and contraction across the control joint in large ceiling expanses in drywall systems. USG Ensemble® ceilings have the same requirements for control joints as drywall ceilings. Control joints are needed for USG Ensemble® ceilings that exceed 50 feet (2,500 sq. ft.) with perimeter relief, and 30 feet (900 sq. ft.) without perimeter relief. Use continuous main tees parallel and on either side of the control joint.

E  joints
F  USG Ensemble® High-NRC Backer Panels
G  USG Ensemble™ Spray-Applied Finish
 DETAILS
USG ENSEMBLE® - SUSPENDED SYSTEM

USG Ensemble® integrates with lights, diffusers and other ceiling utilities the same way that drywall ceilings do.

Linear lights and diffusers integrate with USG Ensemble®. A USG Logix™ Yoke can be used to assist with embedding the linear fixtures into the USG Drywall T-Bar System framing.
USG Ensemble® is framed with USG Drywall T-Bar System using 12-gauge wires and suspended from structure. 12-gauge hanger wires should be installed per ASTM C636.

12-gauge hanger wires should be installed per ASTM C636.
USG Ensemble® can transition easily to an acoustical ceiling system. The transition is very clean when a USG Donn® Brand Transition Molding is used.

Fine details like a ceiling height change can be easily and cleanly done with a USG Compåss® Elite DAS trim.
Sprinkler heads integrate with USG Ensemble® ceiling system the same way as with a suspended drywall T-Bar grid system.
Access panels can be installed in USG Ensemble® wherever plenum access is needed. Most access panels will work and can be coated directly with the USG Ensemble™ Spray-Applied Finish. The best type of access panel for USG Ensemble® meets the following criteria:

1. Has a primed or low-sheen painted finish.
2. Is white in color or is primed or painted white on site before coating.
3. Latch and key access panels work well for reducing damage when opening/closing.

One method of finishing the USG Ensemble® ceiling is to tape the intersection of wall and ceiling with USG Sheetrock® Brand Paper Joint Tape embedded in USG All Purpose Joint Compound and finished with USG Sheetrock® Brand Ensemble™ Ceiling Compound.
Another method of detailing the USG Ensemble® ceiling is to create a reveal at the perimeter by using a drywall L-trim or J-stop. By providing this “perimeter relief” detail, the need for control joints is reduced. Control joints would be needed every 50 linear feet or every 2,500 square feet.

Control joint requirements for USG Ensemble® are the same as for drywall ceilings: Every 30 linear feet or every 900 square feet without perimeter relief. With perimeter relief, every 50 linear feet or every 2,500 square feet.
Ideally, control joints should include a break in the framing. Here, DGLW-26 main tees run parallel with a small separation to fit the control joint. Control joint requirements for USG Ensemble® are the same as for drywall ceilings: Every 30 linear feet or every 900 square feet without perimeter relief. With perimeter relief, every 50 linear feet or every 2,500 square feet.

Special Note: Location of control and expansion joints are the responsibility of the design professional. USG gypsum panel surfaces should be isolated with control joints, caulk or other means where:

— Ceiling or soffit abuts a structural element, column, partition or other vertical penetration.
— Construction changes within a plane of the ceiling.
— Ceiling dimensions exceed 50’ in either direction (2,500 sq. ft.) with perimeter relief or 30’ (900 sq. ft.) without relief.
— Soffit exceeds 30’ in either direction.
— Wings of “L”,”U” and “T” shaped ceilings areas are joined.

Linear lights and diffusers can also be installed in a USG Ensemble® ceiling. A USG Logix™ Yoke can be used to interrupt and support the framing and to accommodate the linear fixtures (by others).
18. RECESSED DOWN LIGHT AT INTEGRATION

Point light fixtures can integrate easily with USG Ensemble®. Either trimless or trimmed fixtures will work.

19. PERIMETER EDGE TERMINATION USING USG COMPASSO™ ELITE FOR DRYWALL

USG Compásso™ Elite drywall trim can be used for USG Ensemble® “floating islands” and “peninsulas” for a clean, finished edge detail. The bottom flange is designed to be covered with joint compound for a seamless edge. The face of the trim can be coated at job site with the USG Ensemble™ Spray-Applied Finish or left factory-painted white.
 DETAILS
USG ENSEMBLE® - SUSPENDED SYSTEM

Reveal trims can easily be integrated with USG Ensemble® to create a unique aesthetic.
USG Compàsso™ Elite drywall trim attaches both parallel and perpendicular to drywall tees.

In lieu of USG Compàsso™ Elite Drywall Trims, a field-fabricated gypsum panel edge can be used to finish edges of “floating” or “island” ceilings.
**DETAILS**

**USG ENSEMBLE® - SUSPENDED SYSTEM**

The USG Ensemble® Suspended Drywall T-Bar Framing system utilizes 12-gauge hanger wires at 48" o.c. max., USG DGLW-26 Drywall Main Tees at 48" o.c., and USG DGLW-424 Drywall Cross Tees at 24" o.c.

**USG ENSEMBLE® - DIRECT MOUNT RETURN AIR PLENUM**

The USG Ensemble® Direct Mount Suspended Drywall T-Bar Framing system utilizes 12-gauge hanger wires at 36" o.c. max., USG DGLW-26 Main Tees at 48" o.c., and USG DGLW-424 Drywall Cross Tees at 24" o.c. The added layer of 1/2" USG Sheetrock® Brand UltraLight Panels are tapped in to create an air barrier between the plenum and Ensemble® ceiling, making it a suitable option for a return air plenum ceiling design.

The USG Ensemble® Direct Mount Suspended Drywall T-Bar Framing system can be installed on a slope, which utilizes 12-gauge hanger wires at 36" o.c. max., USG DGLW-26 Main Tees at 48" o.c., and USG DGLW-424 Drywall Cross Tees at 24" o.c. The added layer of 1/2" USG Sheetrock® Brand UltraLight Panels are tapped in to create an air barrier between the plenum and Ensemble® ceiling, making it a suitable option for a return air plenum ceiling design.
For low-clearance applications, or attaching directly to an existing ceiling substrate or for overhead structure, USG Ensemble® Acoustical Drywall Ceiling can be directly mounted using 1" deep Z-Furring. Various depth Z-Furring can also be used to allow more room for junction boxes or utilities.

USG Ensemble® - Direct Mount System can be attached directly to the underside of wooden floor or roof joists or other wood framing or structures (not shown).
USG Ensemble® - Direct Mount System can also be attached directly to concrete, masonry or even concrete coffers.
USG Ensemble® - Direct Mount System can also be used to frame a sloped ceiling. It can be attached directly to a USG suspended drywall T-Bar system (as shown below) or to sloped light-gauge metal framing (not shown).
The USG Ensemble® Curved System uses pre-engineered, factory curved drywall main tees for consistent, uniform radii. The Main Tees are spaced 48” o.c. and can be spliced together with DGSP180 clips, and the Cross Tees are spaced 16” o.c. The Ceiling system is supported by 12-gauge hanger wires spaced 48” o.c. max. and hard bracing every 24” o.c. The 10’x4’ Ensemble panels can be field curved to a minimum radius of 20’ vault and 10’ valley. (If the length of the curve is exceeds 20’, an additional cross tee will be required to support the butt joint on every other panel.)
USG Ensemble® - Direct Mount System can be directly mounted to a vertical surface and used as an acoustical treatment on interior partitions above seven feet. It can be attached directly to a new or existing wood stud drywall partition to reduce reverberation.

Note: Install above 7' to avoid contact or damage.

USG Ensemble® can also be directly mounted to a vertical surface and used as an acoustical treatment on interior partitions above seven feet. It can be attached directly to a new or existing masonry partition to reduce reverberation.

Note: Install above 7' to avoid contact or damage.
COLOR PROGRAM

The USG Ensemble® Acoustical Drywall Ceiling and Wall systems are available in white and by custom color matching through the following companies:

- Benjamin Moore®
- Sherwin Williams®
- PANTONE®

1. Request customer color samples through your local USG Ensemble® sales representative.
2. Allow three weeks to receive customer color sample.
3. Once the color sample is approved and order placed by purchaser, allow three weeks for the custom-colored USG Ensemble™ Spray-Applied Finish ship with the USG Ensemble® acoustical drywall order.
4. The USG Ensemble™ Spray-Applied Finish is similar to flat finish paint in sheen. Different sheens are not offered at this time.
5. Certain very deep tone colors or certain very bright colors may not be possible to match. USG will be able to determine at the time of custom-color sample request.

** The trademark BENJAMIN MOORE is a registered trademark of Benjamin Moore & Co.
The trademark SHERWIN-WILLIAMS is a registered trademark of the The Sherwin-Williams Company.
The trademark PANTONE is the property of Pantone LLC.
