

Polymeric-reinforcement crack suppression mat Features and Benefits

- Can be used over a variety of subfloors
- May contribute towards LEED® credits
- Installed by USG LevelrockTM authorized applicators

| Functional Unit – 1 Square Meter Cradle-to-Installation with End-of-Life (A1-A5, C1-C4) | Levelrock™ Brand Crack Suppression Mat |

For over a century, sustainable practices have naturally been an inherent part of our business at USG. Today, they help shape the innovative products that become the homes where we live, the buildings where we work and the arenas where we play. From the product formulations we choose, to the processes we employ, USG is committed to designing, manufacturing, and distributing products that minimize overall environmental impacts and contribute toward a healthier living space. We believe that transparency of product information is essential for our stakeholders and Environmental Product Declarations (EPDs) are the next step toward an even more transparent USG. For additional information, visit usg.com and usg.ecomedes.com.

This declaration is an Environmental Product Declaration (EPD) in accordance with ISO 14025 and ISO 21930; 2017. Environmental declarations from different programs (ISO 14025) may not be comparable. Comparison of the environmental performance of products using EPD information shall be based on the product's use and impacts at the building level, and therefore EPDs may not be used for comparability purposes when not considering the building energy use phase as instructed under the Product Category Rules (PCR). Full conformance with the PCR for Mechanical Thermal Insulation allows EPD comparability only when all stages of a life cycle have been considered. However, variations and deviations are possible". Example of variations: Different Life Cycle Assessment (LCA) software and background Life cycle Inventory (LCI) datasets may lead to differences results for upstream or downstream of the life cycle stages declared.

1. General Description

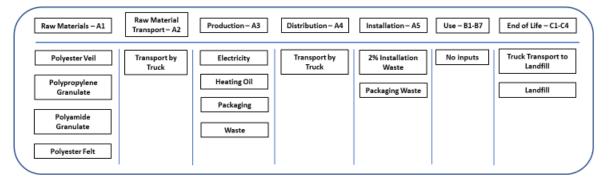

1.1 Company Description

USG Levelrock[™] Brand Crack Suppression Mat is sold by USG Corporation, a leading North American manufacturer of building products and a subidiary of Gebr. Knauf KG. Products are manufacturered by a 3rd party manufacturer located in Maine, U.S.

1.1 Product Description and Product Identification

Levelrock[™] Brand Crack Suppression Mat is a 3/16 in. (5 mm)-thick random filament, non-geometrically-patterned mat used during the renovation of old buildings. Designed for interior use directly over concrete, plywood or OSB subfloors, USG Levelrock[™] Brand Crack Suppression mat is a Class A fire-rated product. It is 3/16 in. thick, 39.5 in. wide and features an adhesive strip on the flap.

1.2 Manufacturing Flow Diagram

1.3 Material Composition

| Material | Levelrock™ Brand Crack Suppression Mat |
|---|---|
| Polyester Veil | 16% |
| Nylon or Polypropylene core laver | 84% |
| Total | 100% |

1.4 Designated Application

The products covered by this EPD are made from a durable polymer resin and are designed to installed on a sutable subfloor with a specified minimum thickness USG Levelrock[®] floor underlayment topping.

1.5 Technical Requirements

| USG Product | Subfloor | Sound Mat Thickness | Minimum USG Underlayment Thickness |
|--|---------------------------------------|------------------------|--|
| Levelrock [™] Brand Crack Suppression Mat | Concrete, plywood or OSB subfloors | 3/16 in. (5 mm) | NA |

1.6 Properties of Declared Product as delivered

USG Levelrock[™] Brand Crack Suppression Mat arrives at the jobsite in rolls as noted below.

| Property | Levelrock™ Brand Crack Suppression Mat |
|------------------------|--|
| Roll Width (in.) | 39.5 |
| Roll length (ft) | 100 |
| Mat thickness (in.) | 3/16 |
| Roll diameter (in.) | 18 |
| Weight per roll (lbs.) | 24 |

2. General Description

2.1 Product Manufacturing

USG Levelrock[™] Brand Crack Suppression Mat consists of a polyester facer veil with a resilient entangled core made from nylon. The polyester facer veil is used as a carrying fabric during manufacture during which the entangle core is deposited using a proprietary hot-melt process.

2.2 Packaging

USG Levelrock[™] Brand Crack Suppression Mat arrives at the jobsite in rolls inside plastic bags. USG encourages the proper recycling of these packaging materials. Both the production and disposal of these packaging materials was modeled in this study.

2.3 Transportation/Distribution

The transport distances (product transport from the point of manufacture to building site) of 1,000 miles (1609 km) by truck were used in this analysis. Final transportation from the building site to waste processing was defaulted to 25 miles (40 km) by truck.

| Name | Value | Unit |
|--------------------------------------|--------------|-------------------|
| Fuel Type | Diesel | |
| Liters of fuel | 0.505 | l/100km |
| Vehicle Type | Diesel truck | |
| Transport Distance | 1000 | km |
| Transport Distance | 621 | miles |
| Capacity Utilization | 0.67 | - |
| Gross density of product transported | 64.9 | kg/m ³ |
| Gross density of product transported | 4.05 | pcf |

2.4 Product Installation

USG Levelrock[™] Brand Crack Suppression Mat should be installed according to published installation instructions. Approved installation procedures are provided in the USG installation guide ic5465 entitled USG Finished Flooring Preparation & Installation Guidelines. Installation of this product is accomplished by manual labor using mostly hand tools. No material or energy inputs are required on the jobsite.

| Name | Value | Unit |
|--|------------------------|---------|
| Auxiliary materials | 0 | kg |
| Net freshwater Consumption | 0 | m3 |
| Other resources | 0 | kg |
| Electricity consumption | 0 | KWh |
| Other energy carriers | 0 | MJ |
| Percent loss per declared unit | 2% of delivered weight | % |
| Waste material generated during installation | 8.24E-03 | kg |
| Mass of packaging waste (cardboad) | 6.79E-03 | kg |
| Mass of packaging waste (plastic film) | 1.24E-03 | kg |
| Biogenic carbon contained in packaging | 9.09E-02 | kg CO2e |
| Dust emission to ambient air, soil and water | NA | µg/m³ |
| VOC in the air | NA | µg/m³ |

2.5 Use

Levelrock[™] Brand Crack suppression Mat is installed under a layer of Levelrock[®] self-leveling underlayment. There are no raw material or energy inputs during the B1-B7 use stages.

| Name | Value | Unit |
|--|-------|-----------------------------------|
| RSL | 75 | years |
| Declared product properties (at the gate) and finishes, etc. | | er's installation for details. |
| Design application parameters (if instructed by the manufacturer), including references to the appropriate practices and application codes) | NA | |
| An assumed quality of work, when installed in accordance with the manufacturer's instructions | | er's installation for details. |
| Outdoor environment | NA | |
| Indoor environment, (if relevant for indoor applications) | NA | |
| Use conditions | NA | |
| Maintenance | NA | |

2.6 End-of-Life Disposal

While USG encourages recycling of its products at end of life through its take back program, all waste generated during installation and at end-of-life is assumed to be disposed of in an appropriate landfill.

| Name | | Value | Unit |
|--------------------------------------|--------------------------------------|------------------------|------------|
| Assumptions for scenario | | | |
| development (description of | At End-of-Life it is assumed that th | is product wou | ld be sent |
| deconstruction, collection, recovery | , to an appripriate | landfill. | |
| disposal method and transportation |) | | |
| Collection process (specified by typ | e) | | |
| | Reuse | 0 | kg |
| Recovery (specified by type) | Recycling | 0 | kg |
| | Landfill | see product weights | kg |
| | Incineration | 0 | kg |
| | Incineration with energy recovery | 0 | kg |
| | Energy conversion | NA | |
| Disposal | | 0 | kg |
| Removals of biogenic carbon (exclu | ding packaging) | 0 | kg CO2e |

2.7 Re-Use Phase

Since this product is covered by a layer of self-leveling floor underlayment, this product would generally not be reused at the end of a building's life.

3. Methodological Framework

3.1 Functional Unit

| Product | Levelrock [™] Brand Crack Suppression Mat |
|--|--|
| Functional Unit | 1 m ² |
| Functional Unit | 10.76 ft ² |
| Declared Thickness (cm) | 0.476 |
| Declared Thickness (inches) | 3/16 in. |
| Surface Weight (kg/m ²) | 0.412 |
| Surface Weight (lbs./ft ²) | 0.0844 |
| Gross Density (kg/m³) | 64.9 |
| Gross Density (Ibs./ft ³) | 4.05 |

3.2 Reference Service Life

A default RSL of 75 years shall be assumed for the product. An assumed Estimated Service Life (ESL) of 75 years is used for building life.

3.3 System Boundary

This EPD represents a cradle-to-installation with end-of-life LCA study for USG Levelrock[™] Brand Crack Suppression Mat. It covers all the production steps from raw material extraction (i.e., the cradle) to end of life disposal (grave).

| | Produc | ct stage | 9 | Con | | on proo Ige | cess | | Use s | tage | | Er | nd of li | ie stag | e |

| Х | X | Х | Х | Х | Х | Х | Х | Х | Х | Х | Х | Х | Х | Х | Х |

USG

3.4 Estimates and Assumptions

The results are limited by the use of proxy processes rather than processes baed on supplier generated primary data. This would include such processes as the manufacture of he polyeter veil. In addition, the data is limited in that the primary data was collected during 2021 and changes in operations may increase/decrease impacts in the future. Other data limitations include the use of secondary data sets instead of primary data for upstream and downstream processes, local impacts vs. global impacts, possible impacts vs. actual impacts, inherent uncertainty in the data sets, accuracy, and precision of impact assessment methodology, etc. Both human activity and capital equipment were excluded from the system boundary.

3.5 Cut-off Criteria

All inputs and outputs to a (unit) process were included in the calculation for which data is available. In case of insufficient input data or data gaps for a unit process, the cut-off criteria was 1% of renewable and non-renewable primary energy usage and 1% of the total mass of that unit process. The total neglected input flows did not exceed 5% of energy usage and mass.

3.6 Data Requirements and Data Sources

The LCA model was created using the GaBi software (version 10.6.2.9) from Sphera. Specific comments related to data quality requirements cited in ISO 14025 Section 4.2.3.6.2 include the following.

Temporal: In the case of production, the LCI data was collected for the 2021 production year.

Geographical: Where possible, all processes were chosen as being representative of US manufacturing processes.

Technical: The data selected for this study is specific to the technology used in the preparation of the various raw materials.

Precision: The raw material usage amounts were derived from plant quality data and on plant product formulas.

Completeness: Virtually all the significant raw material flows (> 99.9%) have been modeled.

Representative: Where possible all the data sets were selected to be representative of US-based production, are less than 10 years in age and are representative of the technology being employed.

Consistency: All the manufacturing processes were modeled in a consistent manner throughout this study in accordance with the goal and scope definitions.

Reproducibility: The information contained in this study, including raw material, energy and transportation distance inputs, have been fully documented in the LCA report.

Sources of Data: The sources for the processes used in this study have been fully provided in the LCA report and are representative of the material and energy sources used in actual production.

Uncertainty: The relative uncertainty associated with this study has been minimized. No significant assumptions have been made.

3.7 Period Under Review/Allocation

No allocation was required in this study. The LCI data was collected for the 2021 production year.

3.8 Comparability

A comparison or evaluation of EPD data is only possible if all data sets to be compared are 1) created according to EN 15804 and 2) are considered in a whole building context or utilize identical defined use stage scenarios. Comparisons are only allowable when EPDs report cradle-to-grave information using a functional unit. Refer to section 5.3 of EN 15804 for further information. Comparison of the environmental performance of this product using EPD information shall be based on the product's use and impacts at the building level, and therefore EPDs may not be used for comparability purposes when not considering the building energy use phase as instructed under this PCR. Full conformance with the PCR allows EPD comparability only when all stages of a product life cycle have been considered. However, variations and deviations are possible.

4. Environmental Indicators Derived from LCA

4.1 Life Cycle Impact Assessment Results

| | | Stage | | | | | | | | |
|--|-------------------|----------|----------|----------|----------|----------|----------|----------|----------|------------------------|

5. LCA Interpretation

The LCA results for the production of USG Levelrock[™] Brand Crack Suppression Mat were dominated by raw materials; primarily the polymers used to produce the product.

Process Dominance Analysis for GWP for the Production of 1 Square Meter of Levelrock™ Brand Crack Suppression Mat
