COMMUNITY COLLEGE REROOF: A HIGH-PERFORMING ROOF BOARD GETS TOP MARKS

Damaging roof leaks at Solano Community College in Fairfield, California forced the school to reroof several buildings. The challenge was to design a roofing system to protect the buildings that could withstand the heavy winds of Fairfield Valley for years to come. This required a versatile roof board that would not only meet the requirements of a 20-year warranty, but that could be both adhered to the membrane and mechanically fastened to the roof deck for maximum wind-uplift performance.

In the end, the choice was easy: USG Securock® Brand Gypsum-Fiber Roof Board.

USG Securock® Brand Gypsum-Fiber Roof Board is a unique, fiber-reinforced roof board that functions at a high level in all types of roofing systems whether mechanically fastened or adhered. Its homogenous composition gives the panel strength and water resistance through to the core without any risk of delamination. These same properties also mean less adhesive can be applied and up to 25% fewer fasteners can be used with USG Securock® Brand Gypsum-Fiber Roof Board, resulting in reduced material costs and a faster installation.

Contractors love using USG Securock® Brand Gypsum-Fiber Roof Board because it can be cut with a utility knife like a drywall panel and contains zero fiberglass making for easy, itch-free handling.

When it comes to providing versatility, durability and performance for the reroof project at Solano Community College, USG Securock® Brand Gypsum-Fiber Roof Board is at the head of the class.

VERSATILITY AND DURABILITY FOR THE LONG TERM

USG Securock® Gypsum-Fiber was the perfect product for this project for so many reasons.
